

Assignment 5

Due: September 27th

Now that you know the breadth of geography (through the specialty groups), the courses the Earth Sciences offers geographers, the jobs available to geographers, and where you might like to visit or live one day, you should have an idea of what the next few years of your life will encompass. For this assignment, I want you to construct a 5-year plan, detailing your expectations for your *professional* life in five years.

Include in the plan answers to the following questions:

When (semester and year) does PAWS state you will graduate?

When (semester and year) do you plan on graduating?

How many hours do you have left to complete? Hint: subtract your number of credit hours from 128.

What will you do after graduation? Go to graduate school? Get a job? What kind of job: industry, government, military?

Do you intend on being in the Mobile area in five years?

What would be your ideal job you would like to be doing in five years? Describe the position, duties, and amount of responsibility.
