

Assignment 4: A Job in Geography

Having a clear understanding as to the types of jobs available to geographers and the requirements of a job that interests you may help you choose particular courses or a specific minor. The following table contains a list of websites that may contain jobs for geographers. Search through the websites, using keywords relevant to your interests (for example, geography, environmental manager, GIS, remote sensing, intelligence analyst) to identify two (2) job advertisements that interest you.

For your assignment, you write a 1 ½ – 2 ½ page paper (typed, double-spaced, 12-point font, 1 inch margin) on these 2 job advertisements. What interests you about these jobs: their location, their pay, their duties, the skills needed for the job? I do not want a synopsis or re-writing of the job advertisement. I want your words! Include a copy of the first page of the job announcements with your assignment.
