

Just-in-Time IACUC Review Grant Application Signature Page

It is the investigator's responsibility to provide documentation that a sponsor will accept the Just-in-Time IACUC Review. This documentation must be submitted to the COM Research Office (COM faculty only) or the Office of Sponsored Programs (non-COM faculty only) together with the grant proposal. This may be accomplished by submitting a copy of the sponsor's instructions, which stipulate that IACUC approval or pending approval is not required at the time of proposal submission, or a letter from the sponsor acknowledging acceptance of Just-in-Time IACUC Review.

NOTE: By signing this statement the investigator acknowledges that all IACUC requirements will be secured before initiation of the proposed project. All investigators utilizing this type of review process are required to submit this signed statement with the university transmittal sheet indicating submission of a grant application to the respective agency prior to receiving approval from the IACUC for a project involving research with animals.

Many agencies provide a short window between the notice of funding and the start date. This window may be too short for normal IACUC procedures to process the application. If you believe this is true for the agency to which you applied, you may submit a new protocol to the IACUC Office prior to the notice of funding in order to avoid delays in the start date. There will be no exceptions to the regular scheduled IACUC deadlines because funding is pending for a proposal, and is not possible to guarantee IACUC approval in advance of the review process.

Investigators who learn that their proposal may be funded should submit a new protocol via the Granite system to the IACUC Office for review. No portion of the proposed research can be conducted until the proposal has been reviewed and approved by the IACUC and funds will not be released until final approval has been received.

I have read and understand the above information and will comply with the requirements.
