Mobile Leading GNP Indicator

Vol. 3 No. 110

Spring, 2008

Don Epley, Director, Mitchell College of Business Center for Real Estate Studies

“Data you can use.”

“Education you can use”

The *Mobile Leading GNP Indicator* contains fourteen time series that have been carefully selected to capture the current and future direction of the local economy into the *third quarter, 2008*. They can be collected and analyzed frequently to alert the user to any changes that could occur in the next three months.

This method is similar to the Business Outlook assessment of the U.S. economy prepared by the Federal Reserve Bank of Philadelphia, and the calculations used in the U.S. Leading Economic Index by the Conference Board. An index at the state level using similar methods is the Oregon Index of Economic Indicators prepared by the University of Oregon.

Mobile Future

The *Indicator* is a *diffusion index* that will vary between *0.0* and *+1.0*. It will indicate the *direction* and *strength* of changes in the level of economic activity. A number greater or equal to *+0.50* indicates a strong signal for future expansion, and a number equal to or less than *+0.50* is a good sign of future weak activity. Each time series included is the latest data available at the time the report is written.

The current Leading Indicator is equal to +0.50. This means that the economy is heading in a moderately positive direction.

Time Series Included

Fourteen time series have been selected to represent current activity that should lead to future growth. The series and their expected performance are the following:

<u>U.S. Consumer and Business Attitudes:</u>	<u>coverage</u>	<u>direction</u>
Index of Consumer Sentiment	U.S.	-
Alabama Business Outlook	state	-
<u>U.S. Business Activity:</u>		
Non-Mfg. Bus Activity Index	U.S.	-
U.S. Leading Economic Index	U.S.	-
<u>Mobile MSA:</u>		
Mobile GNP Indicator Projection	Mobile	+
Non-Farm Employment	Mobile	+
Unemployment Rate	Mobile	+
New Residential 1-Unit Permits	Mobile	+
Home Affordability Index	Mobile	-

Housing Sales	Mobile	-
City Sales Tax Collections	Mobile	+
County Sales Tax Collection	Mobile	-
Total Attraction Visitors	Mobile	+
Special Events and Convention Visitors	Mobile	+

Seven of the *fourteen* indicators recorded a positive direction.

Three U.S. indicators are included because Mobile is not an island and is impacted by national policies and events. In this quarter, all three indicators were definitely negative. The one index reported for Alabama, Business Outlook Index, dropped below 50 percent for the first time which means that the business attitude toward the economy has turned negative.

The new Leading GNP Indicator is equal to +0.50 for all fourteen time series. The index is equal to +0.7 using the Mobile indicators only.

Previous Indexes

<i>Winter, 2005:</i>	<i>+.43</i>	<i>=</i>	<i>moderately positive growth</i>
<i>Spring, 2006:</i>	<i>+.64</i>	<i>=</i>	<i>above average to strong positive growth</i>

<i>Summer, 2007:</i>	<i>+.64</i>	<i>=</i>	<i>above average to strong positive growth</i>
<i>Spring, 2008:</i>	<i>+.50</i>	<i>=</i>	<i>moderately positive growth</i>

Center for Real Estate Studies

The Center was created by the Mitchell College of Business to expand the quantity and quality of real estate studies and education as part of the USA mission to better serve its students and community. Its goal is to offer practical real estate analysis and applied education to help the students and citizens understand local markets, and to assist the real estate professional in day-to-day business.
