Presents Colloquium Speaker

Dr. Rongying Jin
Louisiana State University

Thursday, September 29, 2011
3:30-4:30 P.M., ILB 250

To be or not to be: Superconductivity and Thermoelectrics for Green Energy Application

The phenomena of superconductivity and thermoelectrics are extremely attractive for green energy applications, because they are environmentally benign. However, adequate materials with high efficiency and low cost are yet to be discovered. In my talk, I will discuss the advances and challenges in these two fields.

Refreshments are served at 3:15 p.m.

Host: Dr. R. Godang
